Brent Gibson

AI Development Engineer

Austin, TX | bgibson1618@gmail.com
linkedin.com/in/brent-gibson-76386265 | github.com/bgibson1618

AI engineer building LLM applications, retrieval systems, and tools for collaborative agent development.

Technical Skills

Languages and frameworks: Python, TypeScript, C/C++, React, Node.js
AI tools: OpenAI and Anthropic APIs, LangChain, Langfuse
AI methods: RAG, embeddings, hybrid retrieval, knowledge graphs, multi-agent orchestration, prompt engineering, LLM evaluation

Engineering and AI Experience

Superbuilders | AI Education Engineer Jul 2026 – Nov 2026

- Owned AI content generation and app integration on a two-engineer AP Business team, translating learning-science research into pipelines for teachable knowledge units and assessment questions.
- Collaborated on shared assessment schemas and built import workflows connecting generated content to lessons, quizzes, and exams ahead of a planned student pilot.
- Mentored first-year UT Austin students at the Alpha AI Internship, helping debug applications and prepare final presentations.

Gauntlet AI | AI Engineering Fellow Apr 2026 – Jul 2026

- Completed an intensive, ten-week AI engineering fellowship focused on developing and deploying working applications.
- Built tools that increased multi-agent coordination and provided persistent, shared knowledge across workspaces.
- Developed a module for electronic medical record software that integrated a RAG pipeline and conversational chatbot into the application.

Outlier | AI Trainer and Prompt Engineer (Contract) Jul 2023 – Present

- Designed adversarial prompts and evaluated model responses for reasoning, accuracy, and instruction following; authored and graded human-feedback data for RLHF and other post-training workflows.
- Reviewed AI-generated Python, identifying bugs and assessing code security, efficiency, and readability.

Southwest Research Institute | Student Engineer May 2020 – Aug 2021

- Developed C/C++ firmware for ARM Cortex-M microcontrollers across multiple projects in the Applied Power Division.
- Built Python tools for GPS data interpretation and analysis.
- Synthesized government and technical documentation into briefings for senior engineers.

Selected Projects

Ensemble — Cross-vendor agent coordination

- Created a reusable delegation layer for Claude, Codex, and Antigravity agents, enabling collaboration and independent review across AI vendors and development projects.
- Added backend-specific CLI adapters, agent-to-agent messaging, and a live monitoring console with persistent run logs and status tracking.

Folio — Persistent knowledge for AI agents

- Developed a shared knowledge system that lets AI coding agents retain and retrieve information across projects and sessions, using versioned Markdown in Google's Open Knowledge Format as the source of truth.
- Combined SQLite full-text search, local embeddings, and knowledge-graph traversal into a hybrid retrieval system that returns a single ranked list.

OpenEMR — Independent RAG sidecar

- Implemented document ingestion, chunking, embeddings, retrieval, an API, and evaluations for an OpenEMR RAG module.
- Designed the module as an independently deployable sidecar so OpenEMR had no dependency on it.

Earlier Experience

- Tarsus Entertainment | Project Manager and Software Tester | Sep 2017 – Jun 2019
- Cora Global Concepts | Project Manager | Jan 2018 – Jan 2019 (concurrent with Tarsus)
- Wally's Beverly Hills| Restaurant Manager | Sep 2014 – Aug 2017

Education

California State University, Northridge | Bachelor's degree in Computer Science, 2022
